

Xos AC and DC Chargers

Xos charging solutions include a suite of AC and DC charger options to accommodate the charging of Xos and other light duty and commercial electric vehicles.

Xos chargers are tested for interoperability across a range of commercial fleet vehicles including Xos commercial vehicles.

AC chargers utilize J1772 standard connectors, and DC chargers utilize CCS1 connectors.

Xos chargers can be controlled through the Xosphere energy management system enabling fleet operators to remotely monitor, maintain, and control charging profiles and schedules to optimize total cost of ownership.
